

FuelGuard will fix your fuel contamination

THE FUELGUARD ADVANTAGE

- 1 **Expert petroleum** technicians capable of fixing any issues caused by fuel contamination.
- 2 **No waste** left on site.
- 3 **Customized filtering equipment** designed to remove water and particulate from fuel.
- 4 **Chemical additives** are applied to kill bacteria and restore fuel to optimal condition.
- 5 **No down time of your fueling system** is necessary, you can fuel your equipment while we work.
- 6 **24/7** response.
- 7 **Worry-free preventative maintenance** Fuel Quality Plan available.

9452 Philips Highway, Suite 2
Jacksonville, FL 32256

FuelGuard is the fuel quality division of **Guardian Fueling Technologies**.

Guardian is a licensed petroleum contractor, specializing in fuel systems, as well as a licensed building contractor and licensed mechanical contractor. At Guardian, we're proud to self-perform all our work and be a distributor for best-in-class PEI Manufacturers.

Guardian provides complete design/build, installation, maintenance and financing of petroleum systems.

Branch Locations to Serve You Throughout the Southeast

YOUR BUSINESS RUNS ON FUEL

CLEAN FUEL RUNS ON

FuelGuard
*fixes the problems caused by
today's fuels.*

Contaminated diesel

Why Contamination Occurs

ULSD

Removing sulfur from diesel allows bacteria to grow and consume your fuel.

Advanced Refining

Changes in the advanced refining process has resulted in unstable diesel fuel.

Water Intrusion

Creates an environment in fuel for microbial contamination to live.

No Fuel Quality Plan

Without regular assessment, hidden fuel contamination continues to grow.

Effects of Fuel Contamination

Vehicles and Heavy Equipment

Contamination can cause filter plugging, bad injectors, and engine failure. Fuel contamination is especially damaging to newer Tier 4 engines.

Emergency Generators

Long-term storage with low turnover leads to fuel degrading. This can lead to critical equipment failure, when your equipment is needed most.

Equipment Running*

Call FuelGuard today at 904-349-2347

Ethanol Blended Gasoline:

Water intrusion causes ethanol to separate from gas, lowering octane levels and leaving the fuel unusable.

It only takes a small amount of water to cause your operations significant issues.

FuelGuard can reverse the effects of phase separation and save your fuel.
